Projects & Involvement

Professional Portfolio

Application: https://isaackice.github.io/portfolio-id/

Repository: https://github.com/isaackice/portfolio-id.git/

Created using strictly vanilla HTML and CSS

Marvel Characters

Application: https://pljon.github.io/marvel-character-project/

Repository: https://github.com/pljon/marvel-character-project.git/

This application was built using HTML, CSS, JavaScript and Web APIs

Managed all of the styling on the web application using vanilla CSS along with linking and making calls to the Wikipedia API while my teammates worked with the Marvel API

4RealGamers

Application: https://game-info-app.herokuapp.com/

Repository: https://github.com/ogwalrus/Game-Info-App.git/

MERN stack application built using JSON Web Token for user authentication and other technologies such as React, Bootstrap, custom CSS, API, GraphQL and many others

Managed the front-end development in this project while my other teammates focused on the back-end portion

This application allows the user to create an account, sign-in, search/view games, and purchase the games through specific stores
